Title:

Comments: An UNEQUIVOCAL NO to this absurd logging "project". It is a ridiculous and damaging departure from previous Forest Service management direction.

Local economies would be damaged while timber company fatcats make a killing.

The Forest Service's project overview statement is political double-speak at best and outright lies at worst:

"This project...improve wildlife habitat" - absolute nonsense. No wildlife gains from having its habitat destroyed.

"enhance huckleberry areas" - really, this is the best the USFS could come up with?

"improve forest stand conditions" - the forest and its ecosystems are doing just fine without logging company slash-and-cut "improvements".

"and contribute to the economy via timber harvest" - contribute to the profits of big logging firms, while damaging local economies that benefit from outdoor recreations dollars.

An absolute NO to the "North Fork Nooksack Vegetation Management Project #58218".
