Title:

Comments: I don't understand the reasoning for this project. With it's impact on climate change, the impact on wildlife due to more and more felling of trees and clear cut areas, the addition of more logging roads which break up the forests into "tracks", this project is just plain wrong. There are efforts to help wild salmon habitat along the Nooksack and this project would undoubtedly hurt that effort. Calling this project a "vegetation management project" is putting a pretty label on a really bad idea. The short term employment and financial gain for some people is not enough (in my opinion) to offset the long term damage to the environment that would be done by this project. I love this area and would hate to see it ruined by this project. Please do not proceed with this travesty!
