Comments: Thank you for the opportunity to comment.

My primary concern is the condition of the Camp May Road. On a good day, the present condition of the road is awful. A heavy rain can wash out portions of the road. It is very poorly drained.

The construction of the water pipeline and electrical/fiber optic conduits may further degrade the road - which will eventually put the entire project at risk of being washed out by a heavy rainstorm.

When the construction contract is released for the installation of the pipeline - it must include provisions to improve the road, or at a minimum - to not degrade it further.

Thank you,

Jean Dewart
