Comments: Re: Proposed logging in the Nooksack Watershed by the USFS. It is paramount that an EIS be completed before this massive project is considered. This project threatens water quality, exacerbates climate change, impacts wildlife habitat, endangered salmon restoration, and recreational lands for the foreseeable future. Logging on private and state lands is already occurring close by and this would just compound the damage. An EIS is crucial to a decision to allow this proposal to go any further. Thank you for considering my concerns.
