Comments: I strongly oppose the proposed logging in Project #58218 for a number of reasons. The most important include the following:

1. The forests are essential in fighting the problem of climate change, a significant threat to our area and the entire planet. The negative impact of the logging of such a significant area will affect human and natural communities for decades.
2. The proposed area for logging includes a heavily used recreation area, benefiting nearby communities and the visitors who come from all over the state, the country, and the world. It's much more valuable as a long-term outdoor recreation area than as a short-term supplier of timber.
3. All the citizens of the United States own this land. It should not be used for the profit of a few. The proposed project will build more logging roads, disrupt the habitat, bring in invasive species, and ruin recreational opportunities for generations. Please dismiss this proposal.
