Title:

Comments: I believe we need an Environmental Impact Statement for this project. The massive scale it will be executed on, the effect it will have on the surrounding area, and the huge departure from the goals of the US Forest System, definitely require an EIS. Logging these forests will remove a huge source of carbon sequestration potential, clean water, and wildlife habitation, and the impact will be felt for decades. The Forest Service must not construct new logging roads, including so-called "temporary" roads, which act as vectors for invasive weeds and human-caused abuses (including fires), while fragmenting habitat. Instead, the Forest Service should permanently close unneeded decaying roads.
