Comments: I write in opposition to the proposed plan which I believe will cause irreversible harm to this beautiful forest area. The scope of this project should mandate an environmental impact statement be completed before any action is approved or taken.

This area is critical to protecting clean air and water and is home to many species of wildlife whose habitat will be destroyed. This is a pristine area that serves a greater purpose of carbon sequestering which is critically important in playing role to mitigate climate change.

If this plan is implemented it will have devastating effects for years to come. I again want to reiterate the urgent need for an EIP before this plan moves any further.

Thank you for your attention to my concerns.
