Comments: I support Warren Hern's thoughtful research and opinion on this topic. Drilling without knowing if we will move forward with the reservoir project could result in pointless destruction and damage to the wetlands, and there are so many reasons not to undertake the reservoir, most importantly increasing nearby geologic/tectonic risks. In summary, I do not support this project and would either request that it not be allowed to proceed without including advance public approval for the reservoir project (the latter which I would personally not approve) or that the entire project be rejected. Thank you - Anne Cerrone
