Title:

Comments: I believe this is proposal should be denied and and further water development halted. I also believe that separating the dam prospecting and building activities is a dishonest approach to piecemeal destruction of a wonderful area.

1. These activities and any dam construction activities are specifically prohibited by the wilderness designation. '
2. The Colorado River basin is over prescribed and maintaining stream flows should be a much higher priority than a tenuous water harvesting project with very junior water rights.
3. The principle beneficiaries have been less than vigorous in pursuing water conservation practices and destroying a stream to support acres of non-native and unsustainable lawns is a horrible trade off.
