Comments: The process of drilling and creating a dam in this area will dislocate and devastate the animal population in that area. It will destroy the ecosystem and take away land that should stay reserved for the wildlife and nature. You cannot determine the potential hazards of drilling for the dam without discussing the utter devastation that the dam would cause. I am absolutely against both drilling and the dam. Leave the National parks alone. Leave the wildlife alone. Leave nature alone. We have already destroyed countless acres of land. Don't disrupt this area when it's completely preventable.
