Comments: The Trump Administration has already demonstrated it will stop at nothing to ravage our environment, forests, oceans and public lands for the almighty dollar and its rampant corruption.

The huge and ridiculous scale of desired logging in this proposal absolutely **REQUIRES** an Environmental Impact Statement (EIS) be completed first, with many weeks' notice to the public with hearings when complete before ANY action is taken.

As logging these forests defeats their carbon sequestration potential for **\*\*decades\*\*** to come in the future, the US Forest Service must **\*\*fully\*\*** weigh and evaluate the importance of this National Forest for reducing the existential dangers of climate change to both our regional ecosystems and human communities **BEFORE** allowing any logging, let alone this ridiculous, corrupt and greedy proposal.

Also, given the rampant extensive and ongoing clearcutting operations on private and state timberlands nearby which are already bad enough, the Forest Service must prioritize **PROTECTING** our National Forest to mature naturally for carbon capture, clean water, and sensitive wildlife habitat given the state and private actors are not stepping up. Set an example rather than follow the greed train to climate disaster.

Finally, the Forest Service **\*\*must not\*\*** construct new logging roads, including so-called "temporary" roads - often anything but temporary in practice - while fragmenting habitat. Instead, the Forest Service should **\*\*permanently close\*\*** unneeded decaying roads.
