Title:

Comments: I am completely opposed to any commercial logging, certainly clearcutting or its variants where a few percent of the original trees are left. Any logging other than for pre-commercial and commercial thinning (no more than 25% cut on any stand every 50 years) to allow improved growth for remaining trees for carbon uptake and sequestration over the next century until we have reduced carbon to 350ppm in Earth's atmosphere. Highest rate of carbon uptake is not even reached until Doug fir and other Western Cascades forests are 80+ years old! Other important benefits which should not require naming (but I am forced because of your mismanagement) including interior forest cooler and more humid environments in summer retaining soil moisture and producing late summer instream flows for salmon and other fish are another critical product produced by intact mature forests. Natural forest habitat for regional biodiversity again are another priceless benefit of mature diverse natural forests. To propose clear cutting these forests is clearly criminal looting of our public lands and part of the great rape of America's public lands at the hands of a rogue criminal Republican business fascist administration. How can you federal employees even work for this evil empire elected by a minority of the American people! Those of you still working for the USFS are now part of an open criminal enterprise that has taken over the federal government run by corporate industrial sociopath timber ranching and mining thieves and thugs. We the people demand you stop helping these monnsters destroy the world!!!
