Title:

Comments: This proposal, in its scope, is a total departure from what I have understood to be the direction of Forest Service management. What is repugnant to me is that there has been no EIS completed and clearly there are significant local impacts.

Has the Forest Service fully assessed the impact of this and other deforestation efforts on climate change. In case you are not up on scientific consensus, we face an existential crisis, and each acre of forest destroyed is but another nail in our collective coffin.

Be real. You need to hold off until next year. By then, we may have an Administration that values carbon capture, clean water, healthy ecosystems and wildlife habitat.

Please, for the sake of my grandchildren and yours, No more logging roads including so-called temporary ones. Enough is enough. The handwriting is on the wall and it is being scribbled there by our children, grandchildren and those yet to be born.
