Comments: I would like to request you publish a thorough and more recent investigation of the possible effects on the riparian areas and creek channel to canyon creek including logging harvest and access. Will any forests in the vicinity of the creek be logged? What will the impact of logging road creation and logging be on fine sediment loading in the creek? This creek is a stronghold for large woody debris providing excellent coldwater salmonid habitat. Maintaining the supply of large diameter riparian trees and minimizing fine sediment influx is essential to maintaining salmonid rearing and spawning habitat in the watershed.
