Title:

Comments: Here is my Major Scoping Concerns Bullet List

What provisions will there be a for professional slope stability evaluation in potentially unstable slopes slated for thinning or clear cutting?

What will the ratio between Clear Cutting and Commercial Thinning in the Stand Regeneration area? Can clear cutting be minimized?

How will harvest and log yarding technologies be selected to minimize environmental damage, particularly in riparian areas?

How will the selection of tree species for replanting clearcuts and leave trees in thinning prioritize the re-establishment of historic and environmentally appropriate tree and plant communities?

In these troubled times it's even more important that we work to preserve and restore the environment that is under increasing pressure from climate change and irresponsible human impacts.

Thank you,

Mia Fioravanti
