Comments: The San Juan National Forest must insist on a detailed analysis of climate change consequences by all projects proposed on the national forest, including ski area expansions. Ski area expansion does not justify lynx habitat destruction. Additional development in the East Hermosa Creek watershed, with its reviving cutthroat trout population, is simply unacceptable.
The Forest Service needs to slow the environmental analysis process. Please wait for Game and Fish's analysis on lynx activity and habitat in the Purgatory area. Purgatory should be required to undertake a thorough greenhouse gas/carbon footprint analysis of any development schemes.
