Comments: The proposal to improve Ryman Creek trail so it is a rideable singletrack route accessing the Colorado Trail has been a long term project and would be a great alternative to riding on the dangerous highway and riding up dirt roads to create loop options. However, I am against the addition of a seasonal closure blocking all users from access May 15th to June 30th requested by the group Backcountry Hunters and Anglers and Colorado Parks and Wildlife CPW (who generates income from the sale of Hunting licenses. Such an important multi use trail should be multi use year round, weather conditions (dry trail) permitting. Hunters should safely hunt and not put hikers or bikers or other users of public land in danger. I hike and ride in the US Forests frequently during hunting season in the fall and that is just a reality of public land. Thank you.
