Comments: Comments on North Fork Nooksack Project #58218.

Dear Mt. Baker District Ranger Uloth,

I'm writing to provide scoping comments for the North Fork Nooksack Vegetation Management Project #58218.

I support comprehensive restoration actions to improve forest health and ecological resilience in the North Fork Nooksack River watershed, including careful thinning of dense, young plantations to increase structural diversity, removing unnecessary roads, improving conditions for fish and wildlife, and enhancing recreation site access.

The North Fork Nooksack watershed contains vast old-growth forests with more than 1,700 acres of critical spotted owl habitat, the struggling remnant Nooksack elk herd, prime mountain goat habitat, and key wildlife corridors facilitating movement between the Forest, Wilderness areas and the larger transboundary area including wildlands in Canada. This designated Key 1 watershed also provides critical habitat for threatened fish species.

I strongly oppose the massive 1,900-acre clearcut around Canyon Creek that was recently proposed. Canyon Creek is an important North Fork Nooksack tributary known for floods and landslides, and is home to Endangered Species Act-listed Chinook salmon and steelhead as well as bull trout. Nearly the entire area proposed for clear-cutting is classified by scientists as high risk for landslides and erosion, and is therefore designated as a Riparian Reserve where timber harvest is prohibited. Rain on snow events in the recent past have caused extensive damage, costing millions to repair.

Given the extensively degraded aquatic conditions in Canyon Creek, there is a great opportunity here to reduce road densities that drive sediment delivery and flooding, improve large tree and old-growth habitat in riparian and lower elevations, reduce old forest habitat fragmentation, improve wildlife habitat, and increase ecological resilience to climate change (see Canyon Creek watershed analysis). These objectives, which align closely with the Nooksack Integrated Restoration and Enhancement Project, should be the priority actions for Canyon Creek and elsewhere in the Nooksack, not a massive clearcut.

Please reduce the forest road density in deer and elk winter range to two miles of road per square mile of area or less to improve habitat security, and look for other opportunities to reduce the road network in the North Fork Nooksack watershed while responsibly and sustainably supporting outdoor recreation accommodations. There are nearly 60 miles of roads that threaten aquatic ecosystem health that should be considered for removal through this project.

My grandfather and his brothers grew up in Western Washington on a farm, worked in the woods during summers to pay for their own college educations and ran a cedar mill in Forks for decades. Around the time they retired, my great uncle remarked, "We overcut. There's just no denying it." This is an opportunity to do a tremendous good for the forests and people of Western Washington by preserving a remnant of old growth and stewarding the health of our forests, water quality and wildlife. These are inextricably dependent and modern forestry knows this. Please do the right thing for the long term health of Washington.

Thank you for the opportunity to submit public comments,

Ingrid Gulden
