Comments: You need to adopt the most protective provisions for wildlife and habitat in Alternative D, including enforceable standards instead of weak desired conditions.

Alternative F is weak and objectionable on several grounds. For example, the forest continues to define natural migrations based on "management zones" that exclude bison from National Forest habitat. The Regional Forester must list the American bison as a Species of Conservation Concern, and the Forest Supervisor must adopt strong enforceable standards to benefit these migratory giants and allow for connectivity to their habitat on our National Forests.
