Comments: Stakeholders, members of public and policymakers may be unaware that a key condition of the Custer Gallatin National Forest will persist for at least 1,000 years:

A study led by Susan Solomon found that the CO₂ we add to the atmosphere every day remains there for centuries, "so that atmospheric temperatures do not drop significantly for at least 1,000 years."

"What would happen to the climate if we were to stop emitting carbon dioxide today, right now? Would we return to the climate of our elders?

"The simple answer is no."
