Comments: I support the project and would like to see new trail constructions along the Tillman Road Corridor. There has to be better trail connectivity along this area of the GWNF. This trail should attract more people to mountain biking and link the other trails better as the other trails are very long and very steep, which are not suitable for an beginner or intermediate rider. Hopefully this one will better link the region. Mountain biking is growing in Virginia and this could area has the potential to be the hub of mountain biking for the state. Being a mountain bike center means increased tourism and economic activity in the community.
