Comments: I am happy to see progressive planning on a continued effort to improve our trails in this region. We have a diverse user group and creating more opportunities for all to get out and use our resources is important. Improving an already good network and planning for further improvements is the way we all should be thinking. The efforts between the forest service and local hiking/biking clubs is good, but how do we really capitalize on what our forest has to offer? I think this is another big step for improvement in the area and getting more users off an open forest road helps with safety for the ones driving forest roads and the user groups who are able to avoid open roads and traffic. I would love to see a bigger push for more improvements in our district and surrounding areas. This trail is especially important for adding a great opportunity for new cyclist to experience the GW and with its location being closer to local communities it will be a easier trail to access and use for any type of user.
