Comments: i am writing to voice my objection to the final analysis concerning the forest plan for the custer gallatin national forest.my concern is that wild bison has not been listed as species of conservation concern.this iconic animal,a true native,needs to be listed in order to maintain quality genetic diverse animals to keep the animal as God intended.also as concerning is the fact that habitat standards protecting migrating bison on national forests is missing.this is essential to maintain healthy herds.too often,it seems,politics, not science,enters the equation such as prioritizing cattle grazing.the public and tribal support is overwhelming to protect and help prosper bison on forest land.please consider changing the plan to include the above concerns.thankyou
