Comments: Eastside Screens Plan Amendment

Most Forest Service Regions consider 10 trees/acre > 21" to be old growth in grand fir PVG. If two of these trees had spike tops and there was an additional 2 snags/acre > 21" you could manage for old growth, big game forage and timber production. Managing for old growth and timber would require group selections to be planted after harvests and PCT to an 18' foot spacing 15 years post planting.
