Comments: I am sending this email to show support for the proposed actions of this project. As stated in the scoping letter, this project will help get the national forest closer to the desired conditions as per the Forest Plan. The current condition of the forest is very mature. We need more ESH to help support an array of wildlife. The proposed actions also help improve the watersheds. If implemented, this project should also help the project area become more resilient to wildfires. The current conditions make the forest very susceptible and increases the costs of containing/fighting these wildfires which have become all too familiar.
