Comments: I'd like to voice my support for additional trails on Narrowback Mountain. This part of the GWNF is the most accessible in the area and offers terrain that is suitable to beginner level bikers and youth riders to experience true mountain riding in a safe environment. The addition of a trail that connects to other single track directly is a huge benefit to the Shenandoah Mountain area since the area is so large any connecting feature that bridges one trail system directly to the next is essential to benefit rider experience and it serves to decrease the amount of riding and more challenging navigation skills required when combining different trail systems into one longer ride.

The trail #432 section that would be replaced is not useful to equestrian or cycling users and the new trail would be much more engaging as a primary trail in the Narrowback/Festival trail system. As you can tell this large area would benefit from more trail connectivity to facilitate more ease of access to these wonderful trail resources.
