Comments: This project is a great idea! With the high number of people using the National Forest in the area, being responsible stewards to the land is crucial to its long term sustainability. Prescribed burns help promote longterm healthy forests, while also help keep human communities safe. Our area needs more of this! I also love that this project is going to create a formal trail system on this side of the valley! Taking off system, neighborhood trails and bringing them into a system that desperately needs more sanctioned Trails is a great idea! More trails on the north side would also hopefully spread out where people congregate now, and lower the negative impact people can have on the forest in popular areas like Castle Rock or Cougar Crest.
