Comments: My comment is in reference to Appendix G Northern Rockies Lynx Management Plan of the 2020 Land Management Plan for the Custer Gallatin National Forest. I do not agree that section of Alternative F, Scenario 2 is the best choice. The protection this alternative provides would allow the Lynx habitat to diminish as the the population goes through natural increases and decreases in population. A better alternative is Alternative F, Scenario 1 which not only includes habitat currently occupied but also habitat that could potentially be occupied. This would allow the population to remain constant with natural increases and decreases.
