Comments: Your forest management plan needs to ensure these crucial public lands are adequately protected to retain & phance this ecosystem's wildlife, habitat & protected to retain & protected & protecte

My 4 objections to your final plan point out where I think you can make important improvements:

- 1. The plan fails to manage lands that have wilderness characteristics as wilderness, or in a way that preserves that potential. Once lost it'll be gone FOREVER.
- 2. Mechanized use outside the current areas in the Crazy Mt.s backcountry will undoubtedly cause unwanted habitat degradation & prince increase user conflict.
- 3. The proposed size of backcountry in the Crazie's is crazy given the current inventoried roadless area & amp; should be managed with its current wild state.
- 4. Grizzly bear habitat needs a larger recovery zone of protection for successful recovery management! Our CGNF is crucial as a corridor from the Greater Yellowstone to the continental divide ecosystem & populations.
