Title:

Comments: The Tongass is the largest intact temperate rainforest left on Earth and provides vital habitat for eagles, bears, wolves, salmon and countless other species. It is a globally recognized carbon sink and helps to mitigate the worst impacts of climate change, storing approximately 8% of the total carbon stored in all U.S. national forests. It is also the traditional homeland of the Tlingit, Haida and Tsimshian peoples. Please oppose any proposed timber sales/logging projects.
