Title:

Comments: I have guided commercially on the Main Salmon river for the last few years and I learned a lot about that river. It is one of the last wild river in the entire United States. Free from dams, agriculture, and mines.

This river is too valuable to put a price tag on. It is too valuable to wildlife to be tainted with dangerous chemicals from mining.

Let the Salmon stay wild and do not let this mine on the south fork pollute it.
