Comments: I am very supportive of this project as a member of the Ruffed Grouse Society and a frequent hunter in WV. New growth habitat is part of natural cycle of the forest. I don't know how Yellow Pine will work for Ruffed Grouse and I seldom hunt below 2500 feet elevation due to West Nile, but habitat is key for all wildlife. I have mixed feelings on the roads past timbering. One of the keys to successful hunting Ruffed Grouse in WV is walking into places people can't drive or quad into and road hunt. In closing I am very supportive of this projects and any project that helps restore the forest balance as a renewable resource with an 8-12% rate of new growth forest.
