Title:

Comments: This proposition would destroy more than 5,100 acres of critical old-growth habitat in the Tongass National Forest in Southeast Alaska. I fell in love with Southeast Alaska 3 years ago and the sacredness of the place is irreplaceable. Not to mention the value the forest and trees have for our entire societies health. "As forests across the America's burn, the last thing we need to do is destroy old-growth forests in the Tongass Rainforest - one of the United States' best defenses against furthering the climate crisis," said Osprey Orielle Lake, Executive Director for the Women's Earth and Climate Action Network (WECAN). "Existing within the territories of the Tlingit, Haida, and Tsmishian peoples, the Tongass is a vital ecosystem necessary to the traditional life-ways of local Indigenous communities. Destroying critical old-growth in the Tongass, not only devastates wildlife habitat and harms the climate, but disregards the sovereignty of Indigenous peoples and further perpetuates modern genocidal policies. We must stand together for our forests, communities and the climate."
