Title:
Comments: Please do not approve this mine. It is past the time when America should be leading the world in matters of the environment. We have some of the most pristine lands on this earth and it is our duty as citizens to protect them for future generations. It is my understanding that the Salmon River is one of the most critical ecosystems in the west. The economic and societal benefits of mining pale in comparison to those presented by conservation efforts. Water is the lifeblood of all living creatures, please do your part in protecting this resource by stopping all future mining near the Salmon River
