Comments: I cannot begin to articulate my frustrations with this proposed project. Is there any corner that can be left undone is this already over mined watershed. We have enough damage and damage waiting to happen (Thompson Creek etc.) in this watershed that there is zero need for any more activity and subsequent insult. In short let's stop stepping over dollars to pick up dimes. Once this drainage is damaged more that it already is there is no getting it back. In closing i.am exhausted with feeling like I am stuck in my grandfather's ear. Can we not look to newer, healthier, and subsequently better options than open pit mines and the endless quest for gold. This is the 21st century, it's time for everyone to grow up!!! Thank you for your time in this matter!!!
