Comments: The South fork of the Salmon River is where I have formed some of my best memories. I have been on float trips down this river with friends, family, and wildlife. Every experience on the river has been a unique and magical highlight of my life.

As one of the last truly wild and scenic rivers in our country, I believe that it should be aggressively protected and preserved in its natural state. Therefore I strongly oppose the development of the mine. The thought of mining chemicals making their way into this pure river breaks my heart. The ecosystem is healthy there and should stay that way.

Please take these concerns seriously and prevent the development of this mine,
Myself and future generations will thank you.
