Comments: I am opposed to allowing ebikes on all trails. I don't care where they are located. Trails should be off limits to any and all motorized travel.

There will be conflicts between those on foot, horses and other livestock, and human powered bicycles.

Additionally, the use of ebikes gives access to remote locations to those that can't otherwise be there, due to physical limitations, lack of applicable knowledge or a lack of interest in being self sufficient. What happens when an ebike fails? How does this individual get out? Who is responsible for rescuing them? How does the broken ebike get removed from the trails?

Many people enjoy the outdoors as an escape from the developed world. Who wants to gear the whining and grinding of an ebike.

Ebikes will also expand the width of trails, creating erosion and drainage problems. They will also do great damage to riparian areas.

These issues are just off of the top of my head. There will be other problems that I haven't thought about.

Finally, I am a senior citizen. If I can't get up or down a trail on my own I don't belong there.

No to ebikes on all trails!
