Comments: It is imperative that our wild spaces remain unencumbered by any sort of human activity. WE are already seeing the effect that human activity is having by the extreme weather we are having across the globe. Allowing recreational vehicles in our forests will only do more damage to these pristine areas and will accelerate climate change. For the sake of our survival it is imperative that our forests remain free of human activity. Please do not allow recreational vehicles to threaten the lives and sanctuary of our forests.

Thank you for allowing public comment.
