Title:

Comments: We would prefer that the area not be changed, and that nothing be done to alter it in any way.

It is a place we have been going for years to see trogons, and other wildlife; and If the trogons and others are further pushed back, we would not see them. These days we cannot hike, and we've been pleased and grateful they come out where we can see them. If there were more facilities, there would've greater numbers of people and traffic as well, and that would also serve to push birds and wildlife further away. Thank you for considering our needs as well as those who desire what they might call improvements, but would not be so for people who are less able to walk longer distances;

nor would they be improvements for the birds and wildlife accustomed and re accustomed, after the fire, to the area.
