Comments: Class 1 electric mountain bikes should be allowed ANYWHERE regular mountainbikes are allowed to ride. Class 1 electric mountain bikes ride, handle and behave like a standard bicycle and put out less watts than a strong rider on a regular bicycle. I implore you to look into what these bikes are, and more important what they are NOT. Class 1 electric mountain bikes very much belong where all bikes belong and in fact it's unsafe to relegate them to motorized trails because they really truly are just bicycles with less power than a strong rider on a regular mountain bike. Power meters on standard bicycles bear this out. Ebikes are NOT motorcycles, or any of the other outlandish things being suggested in comments to you. Please allow Class 1 ebikes.
