Title:
Comments: I am a 17 year resident in Deer Valley Subdivision and a 38 year property Owner. From the outset of ownership, I realized that the greatest threat to my property and its value was wildfire. Hence I am most supportive of your plans for this project and why I have worked hard to help ensure that Deer Valley has been mitigated.

Over the years of observing your activities along these lines in the forest surrounding Deer Valley, the most successful activities, from my perspective, was when you folks communicated with us the best. Already those of us who recreate in the forest have seen blue and orange trees being marked and wondered if there would be firewood available. Would be nice to know and not have to ask! More importantly, when prescribed fire is planned and recognizing that that is a moving target as to timing, communication is critical with those of us in the area. Many are on O2 and hence already have respiratory issues, communication is essential for neighbor cooperation.

It appears that not all residents in Deer Valley received your latest communication and mailings are expensive. In this day and age of the internet, perhaps a dedicated site to this project, if kept current, could assist with up to date activities.

I am a proponent of forest health and wildfire mitigation, a hunter and lover of the forest...that's why I live here and in Deer Valley. I support your efforts totally in this project. Just keep us all apprised of the what, when, how and why...like a good neighbor would do if their activity might disrupt the enjoyment of the neighbors property.

Thanks for reaching out to us.
