Title:

Comments: I injured my leg many years ago making 99% of mountain bike trails inaccessible to me then I discovered eBikes and my life changed practically overnight. The small amount of pedal assist of a class 1 eBike provides opens up so many trail systems for me and has been incredibly beneficial to my health. There are thousands of people just like me that have had their quality of life improved with the chance to access areas we thought were out of reach. I am a life long outdoorsman with the utmost respect for our forests and I can say with confidence that class 1 eBikes have no greater impact on trails than conventional MTB's. There are so many others with stories like mine so please keep our trails open to ebiking. And thank you for your time
