Comments: Please consider the use of ebikes Class 1 on trails and roads in Forest Service areas. Being a cyclist for 30 plus years and owning both non-ebike and ebikes they are very similar in operation. When traveling down a trail they are exactly the same as a non ebikes ice you do not pedal going down hill. Going up the motor assist the effort you put in as you pedal. It does not make it faster only easier going uphill. Being 66 years old this make riding possible again, after a broken hip caused on a slip in my driveway.. Another example, if i was riding with a fit 20 year old up a hill I would be able to keep up with him under his own power. So it make a senior feel 20 again. We will all be were I am today so this is a boon to people that would like to be in the woods and get fitter while they ride. Thanks for your consideration.
