Comments: I believe that the East Fork of the South Fork of the Salmon River is definitely in need of help. If Mida's Gold is actually able to do everything that they say they will to help the river then i think this could be a very beneficial project for both the river and the economy in that area. I do not know the logistics of everything they say they are going to do so I have no idea how possible all of that is. From what i have heard, it seems like most of Mida's promises are unrealistic and will most likely not happen, therefore I am not in support of the project. I believe that Mida's gold is most likely jst trying to seem very environmentally concious and safe, while in reality they just want permission to extract the ore and do not care too much for the environment.
