Comments: In my opinion Class 1 e bikes do less damage to a trail then a tradition analog mountain bike. In many cases it can maintain traction uphill better then a traditional bike. thus causing less damage then spinning out and walking up a loose traction situation. I have mountain biked in Southern Utah for 30+ years and by far 99% of damage is via lack of education and people just not wanting to adhere to common rules including mud, cryptobiotic soils and fragile desert life.
