Comments: I support class 1 ebike. It is so much more enjoyable to ride ebike in mtb trails. I could double my mileage and still have some energy left to do other things at home, instead of laying all day trying to recover. I ride responsibly, and always say hi when trying to pass. Trail etiquette is very important to share with other users, no matter what bike.

It is not true that ebikers make the trails more dangerous. We just climb faster than analog bike, but downhill speed is all the same, no motor for downhill, no pedaling. Actually my DH time is slower due to heavier bike. Also my dad is 73 years young, on ebike, he was able to ride with me, and he is still slow.

Ebikes allow us to ride without making the heart rate go thru the roof. Very important advantage to stay healthy.
