Comments: I am in favor of classifying e-bikes and allowing access to our National forests. Class 1 e-bikes in particular must be pedaled for assistance. Without a throttle, they are minimally different from an analog bicycle. As well, class 1 e-bikes afford an opportunity for people who may have lost their ability to participate in trail riding experiences due to age or medical conditions. Class 1 e-bikes have allowed my aging father to start mountain biking. They have allowed my friends and family to experience the outdoors on a bicycle without become so exhausted the experience is ruined. E-bikes allow the user a longer workout and experience. To have them allowed in our National Forests would be creating and renewing outdoor biking opportunity for our entire community.
