Comments: I do not agree with any motorized vehicle being allowed on non-motorized trails. Any unnatural power source and motor changes the natural proposition, these vehicles need to be in ohv areas and trails, of which there are already more than enough in most states. There is already a serious lack of quality mountain bike trails in most populated areas of the US, to crowd them with powered bikes is just a slap in the face. This is not even accounting for the increased trail damage from heavier powered bikes, I volunteer regularly on trail maintenance days, anywhere E-bikes are allowed often sees substantially more rutting and trail degradation in places non- motorized trails would likely need no maintenance due to the weight and added torque of powered drive bikes.
