Comments: Hello just wanted to thank y'all for recognizing that e-bikes will allow us older and disabled the opportunity to access more public lands. My wife was the first person allowed to ferry her Segway mobility device over to Cumberland island national sea shore. The rangers were very helpful and impressed with the low impact wheels even were the path crossed the dunes.

My wife and I are life members of the Florida Trail Association and both served many years maintaining the FNST. So we know the importance of protecting our national and state forest. I look forward to your response.

PS: I own a class 1 peddle assist limited to less than 20mph.
