Comments: I have been riding class 1 ebikes for over 2 years. They don't put any additional burden on the trails than a conventional bike. The most important component to ebikes is understanding the classes. You must understand them and everyone involved needs to understand the differences. Only the Class 1 e-MTB needs to be able to use the same trails as typical mountain bikes. Ebikes are pedal assist as opposed to electric dirt bikes which have no business on mountain bike trails.
